PROFESSIONAL SUMMARY

IT Infrastructure Specialist who builds and runs the systems a company depends on. At MIGO Indonesia, rebuilt the office network (7 switches, 19 access points), set up 24/7 monitoring with Prometheus, Grafana and Telegram alerts plus a local-LLM agent that proposes fixes for approval, and shipped **5 internal web applications** (Next.js, Flask, PostgreSQL, SQLite) now used across HR, GA, Finance and brand partners, all self-hosted on a Linux/Docker server I prepared and maintain. Background in enterprise IT support and network operations at Siloam Hospitals Group.

CORE COMPETENCIES

Linux & Docker | Prometheus & Grafana | Network Engineering | Next.js & TypeScript | Python & Flask | PostgreSQL & SQLite | LLM Agents (Ollama) | Vulnerability Remediation

WORK EXPERIENCE

MIGO Indonesia

Sep 2026 - Present

IT Infrastructure Specialist

Jakarta

- Reconfigured 7 switches and 19 Wi-Fi access points and segmented the network by area; internet and Wi-Fi disruptions in the Office and Live Room dropped from frequent to **1-2 per week**
- Built 24/7 monitoring on Prometheus, Grafana, Alertmanager, SNMP and Blackbox exporters: **41 targets, 21 alert rules, 5 dashboards (78 panels)**, 30-day retention, alerts delivered to Telegram
- Built and shipped **5 internal web applications** used by HR, GA, Finance, employees and brand partners, self-hosted on a Linux/Docker server with systemd services that restart automatically after a reboot
- Moved **425 company assets** from Excel into an asset management system with holder and handover history and monthly verification
- Found and closed publicly known vulnerabilities (CVEs) in PHP and Node.js that had been exploited on the server; patched the affected software and restored the server to a secure state
- Wrote the network map and configuration documentation; coordinated with ISPs (Fiberstar, Moscom) during outages
- Day-to-day IT support (2-5 issues per week), laptop/PC setup for every onboarding and offboarding, maintenance of 12 Live Room PCs and around 60 CCTV cameras

Siloam Hospitals Group

Jan 2025 - Sep 2026

Desktop Support Staff

Outsourced via PT Enigma Cipta Humanika from Oct 2025.
Jakarta

- Managed Active Directory accounts and access permissions; administered Microsoft 365 (user setup, password resets, email troubleshooting)
- Configured and maintained VPN remote access; installed and configured access points and handled network troubleshooting
- Supported medical devices and hospital systems; resolved hardware and software issues on PCs, printers and endpoints
- Monitored servers daily to keep systems up; troubleshot Dinstar IP phone systems; wrote user guides to reduce recurring issues

PT. Jui Shin

Sep 2023 - Mar 2024

IT Support

Karawang

- Built and configured PCs to company requirements; installed software and Windows operating systems

- Installed and maintained CCTV systems; configured network switches; troubleshot hardware and software issues

PROJECTS

Network Monitoring with an AI Agent MIGO

Monitoring of switches, access points, server and applications. Wrote the custom parts in Python: an access-point exporter over SSH, a Telegram alert bridge, and an agent on a local LLM that analyses alerts and applies a fix only after approval.

Prometheus, Grafana, Alertmanager, Python, Ollama

Internal Purchase / Employee Catalogue Store MIGO

Employee store for 171 products from 5 brands: orders, payment-evidence upload, Finance verification, fulfillment workflow, invoices, refunds, audit log and role-based access, plus a Brand Portal where brand partners maintain their own product data.

Next.js 14, TypeScript, Tailwind CSS, Prisma, PostgreSQL

Culture Assessment & HR Dashboard MIGO

Online assessment of 7 core values (42 questions, reverse-scored items, score history) with AI-written development feedback; scores are always computed by code, never by the AI. Bilingual, with role-based admin access for HR, GA and IT.

Next.js, TypeScript, Prisma, PostgreSQL, Gemini, OpenAI

Asset Management System MIGO

Replaced an Excel register with a web app for 425 assets: holder, handover history, data validation and monthly verification, with Excel import.

Python, Flask, Gunicorn, SQLite

Scan Portal, Internal Portal, Mekari Sign - Feishu Bot MIGO

Portal for scanner files on a Samba share with PIN-protected personal folders; a single entry page for every internal app; and a Mekari Sign integration that runs digital signing from Feishu (awaiting API confirmation from Mekari).

Flask, SQLite, HTML/CSS/JS, Node.js, Express

Open-source: homelab-monitoring & asset-manager-demo GitHub

A Docker Compose monitoring stack for a small office (8 alert rules, provisioned Grafana dashboard, tested Python bridge to Telegram with an optional local-LLM hint that never runs commands), and a clean rebuild of the asset tracking app with fake data, roles, CSRF protection, tests and a Dockerfile.

Docker Compose, Prometheus, Grafana, Python, Flask, SQLite, pytest

AI Virtual Office Personal

3D virtual office of five AI agents on a local LLM, each with a role; the NOC and asset agents read live Prometheus alerts and the asset database read-only, and their reports quote the real data so model errors can be checked.

Node.js, Ollama, Docker Compose

Hospital Network Projects Siloam

Led the hospital Wi-Fi access point replacement; wrote a switch-port configuration automation script; rolled out CrowdStrike agents to all endpoints; restored slow LAN links; prototyped a server-room temperature and humidity monitor.

Access points, switches, CrowdStrike

EDUCATION

Bachelor of Information Technology Tarumanagara University

GPA 3.10

SKILLS

Infrastructure & DevOps: Linux servers, Docker / Docker Compose, systemd, Nginx, Samba, backups, Prometheus, Grafana, Alertmanager, SNMP and Blackbox exporters, CVE patching

Networking: Switch and access point configuration, network segmentation, VPN, LAN troubleshooting and cable testing, ISP coordination

Development: Next.js, TypeScript, Tailwind CSS, Node.js, Express, Python, Flask, Prisma, PostgreSQL, SQLite, HTML, CSS, JavaScript

AI & Automation: Local LLMs with Ollama, Gemini and OpenAI APIs, AI agents with human approval, Feishu / Mekari Sign / Telegram integrations, automation scripts

IT Operations: Active Directory, Microsoft 365, CrowdStrike, CCTV, PC and printer support, IT asset management
